

Meet the Hospitalists at Silver Cross Hospital

What is a Hospitalist?

A hospitalist, also known as an inpatient specialist, is a provider whose primary focus is the care of hospitalized patients. They are board certified, highly trained, and maintain the highest quality care. A hospitalized patient can rest assured that they are receiving the very best care during their stay at Silver Cross Hospital.

How the Hospitalist Program Works

Your primary care physician has partnered with this independent hospitalist group to see their patients while in the hospital.

Communication is Key!

Throughout your stay, the hospitalist will regularly provide updates on your condition, plan of care, and discharge from the hospital with your primary care provider.

Program Benefits

Hospitalists have sole responsibility to take care of patients in the hospital. This will allow them to visit with a patient or family member at any time of the day, be **available for emergencies**, and to answer questions from patients or families.

For questions call us at **815.300.1100**

The way you *should* be treated.
